Analysis Type		Prices (net price excl. tax)		
		First simulation for a geometry		n Repetitions (with the same model but different speed, COG, draft, etc.)
		Geometry: CAD exchange format ¹	Geometry: simulation-ready STL ²	
Ship resistance (fixed attitude)	Surface-capturing RANS simulation with <ul style="list-style-type: none"> prescribed fixed sinkage and trim angle including wave making resistance 	600€	300€	200€ ³ Discounts: n>5 : 25% n>10 : 50%
Ship resistance (free trim and sinkage)	Surface-capturing RANS simulation with <ul style="list-style-type: none"> solution of sinkage and trim angle 	700€	400€	300€ ³ Discounts: n>5 : 25% n>10 : 50%

Scope

- Our simulation method is suited for displacement vessels as well as high-speed planing or hydrofoil vessels.
- Results are documented in an automatically generated report. It includes among others: resistance, trim and sinkage, resistance distribution, pressure distribution on hull, wave pattern, paint flow images.
- For large jobs with many operation points, we offer discounts³.
- The Price depends on the geometry preprocessing effort. We offer two options:
 - ¹ If you provide the geometry in CAD exchange format (IGES, STEP), we clean up the geometry,
 - ² We can offer considerable discount, if you can provide simulation-ready STL geometries (water tight closed, without self-intersections, one STL file per appendage). If the geometry is insufficient, we will return it to you, until you provide us a sufficient model.
- For the first simulation after a geometry modification (the geometry remains similar to one that was already processed), the price for a simulation-ready geometry is charged.

Further Services

We offer our OpenFOAM-based software including support for use at your site or in the cloud, including customization!
Please contact us for more information or a quote.
